

A FREE Webinar Series for Gardeners

PREPARING ^{the} GROUND for HEALTHY SOIL

**Webinar #1: The Soil Food Web – what it is and why it matters
for gardening success**

Date: March 30th Time: 7:00 PM CST (one hour in duration)

No Fee • Advance Registration Required

The soil food web is all about the world beneath our feet– the myriads of tiny creatures that live in the soil. This webinar will provide you with an overview of this living world and how it works to support clean water, local harvests and a stable climate -- important knowledge to help boost your gardening success and take care of our environment.

Additional future webinars will cover topics such as: how to build fantastic soil structure, creating a great habitat for the tiny and mighty workforce within your garden's soil as well as how to support your "employees" with good energy foods – compost and vermicompost – that are also healthy and nutritious.

Join us and learn what **soil health** really is and why it matters so much to us all.

Future Free Webinars include:

Soil, compost & climate – what you can do in your own back (or front) yard that will help cool and calm the planet (and how you can measure and track your own progress)

Composting and vermicomposting in your backyard – make nutrient- & microbe-rich compost and castings – also, learn how to make compost tea and extract

Soil health, plant health & human health – connecting the dots
